Configure

Register

Get everything connected quicker.

Giving your new router the same network name and password as your old one will help all of your devices connect right away.

Network Name:

Password:

Security Type:

(WPA2 is the most secure.)

WPA2-PSK

Your 5Ghz band will have the same name, but with ".media" added to the end.

You can change this later if you like.

Save and Continue

Why should I rename?

This is what you'll see when you search for your network from other devices. Unique network names are easier to find and remember. If your various wireless devices were previously connected to a different router, using the same network name and password here will mean not having to tell them about a new one; they'll connect automatically.

Good router

The Commissioner of
Patents and Trademarks

Has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this 5,860,492

United States Patent

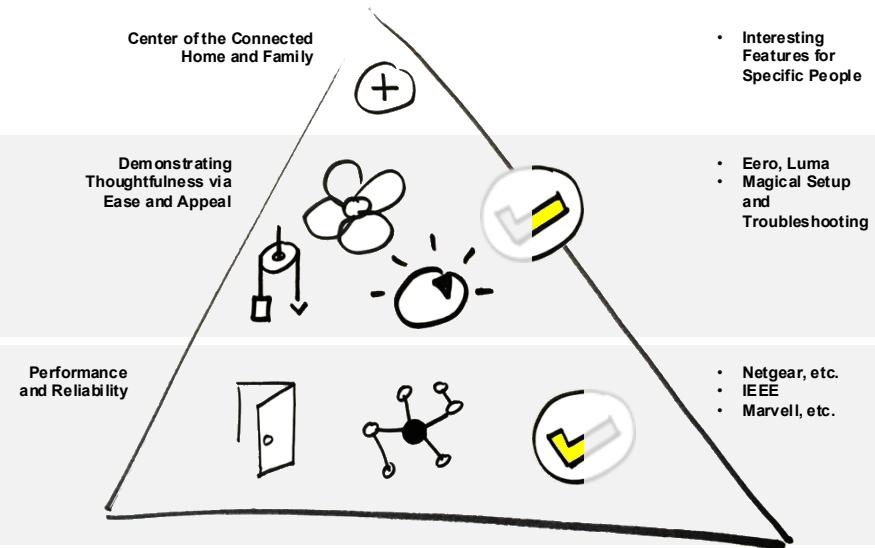

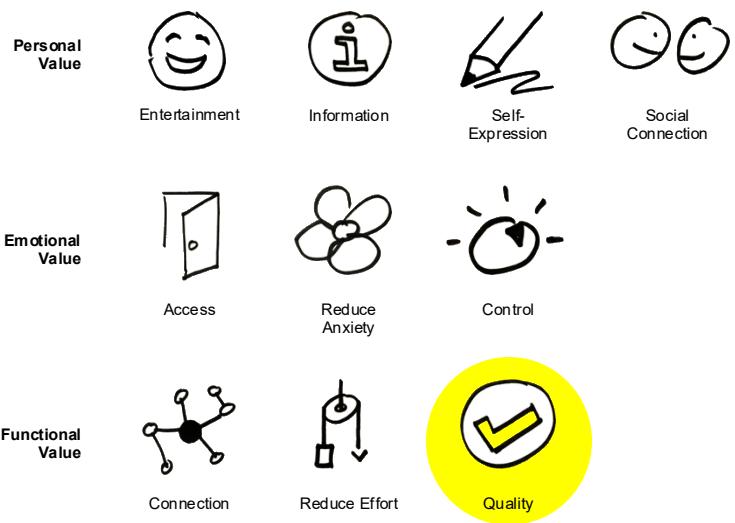

Grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America for the term set forth below, subject to the payment of maintenance fees as provided by law.

If this application was filed prior to June 8, 1995, the term of this patent is the longer of seventeen years from the date of grant of this patent or twenty years from the earliest effective U.S. filing date of the application, subject to any statutory extension.

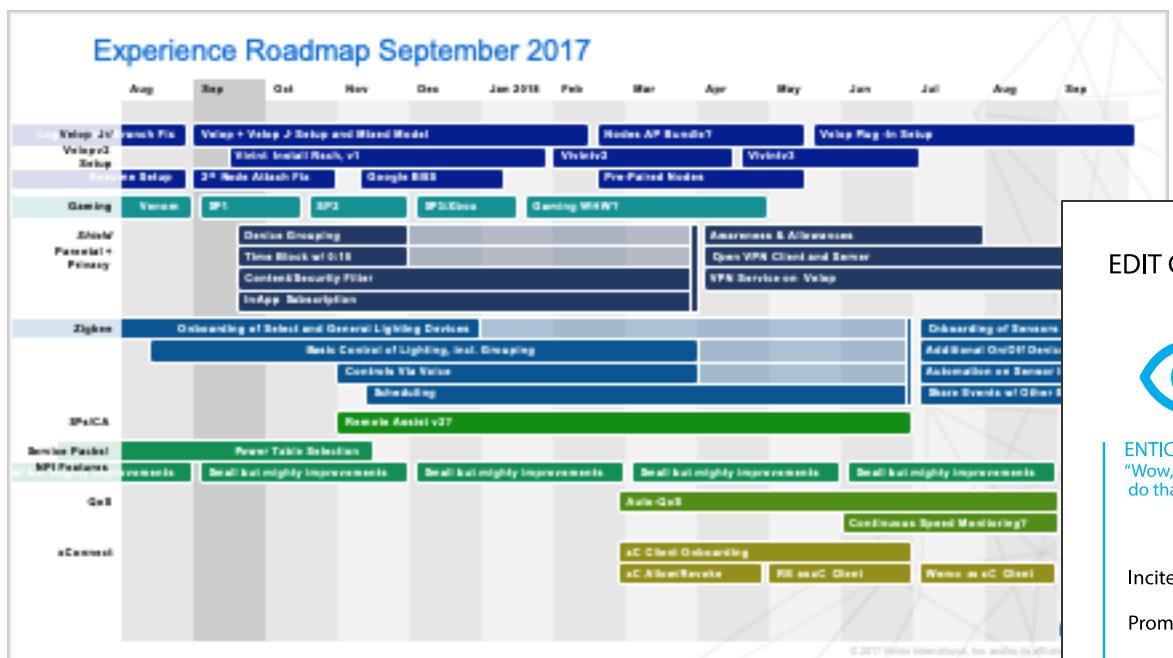

If this application was filed on or after June 8, 1995, the term of this patent is twenty years from the U.S. filing date, subject to any statutory extension. If the application contains a specific reference to an earlier filed application or applications under 35 U.S.C. 120, 121 or 365(c), the term of the patent is twenty years from the date on which the earliest application was filed, subject to any statutory extension.

Belkin Product Report Card

It is something I can fall in love with.

It is smooth and reliable, a product I would call premium, high-quality.

It is reliable and functional.

It is functional, but feels unpolished.

It works ok-ish, but some touch-points feel cheap or annoying.

DESIGN CRITIQUE: DO I HAVE TO?

FEAR NOT.
You'll come to love it.

1. WHAT IT IS

GROUP CONVERSATION TO HELP IMPROVE A DESIGN

- Periodic
- Participatory
- Expected
- Constructive, helpful
- Conversation
- About the work
- Work in progress
- Open

BENEFITS

- Borrow the good thinking of others to help your projects
- See what others are doing
- Directors gain a sense of the pulse of projects

2. WHAT IT IS NOT

NOT CRITIQUE

- Optional
- "FYI here's the design"
- Hippo-driven
- Approval
- Personal
- Pointed

3. HOW TO PARTICIPATE

PRESENTER

- Set the stage (quickly)
 - Where I am in the project
 - Design goals for the work
- Show and tell
 - Here it is, what I'm thinking about
 - What I need feedback on
- Leave space for participant responses
- Listen

PARTICIPANT

- Listen
- Ask clarifying questions
- Consider the work against its objectives
- Talk about the work, not the person
- Offer possibilities

4. OTHER DETAILS

WHAT DO I PUT IN TIMECLOCK?

Presenters book the meeting to the project you presented.
Non-presenting participants book the meeting to _____?

DO I HAVE TO BE FIRST?

NOTE: We will randomize the order of presenters. Each presenter will have a set timeframe to present.

WHAT IF I DON'T HAVE SOMETHING TO SHOW?

You probably have something to show.
Comfort will improve with practice.

WHAT IF MY WORK IS NOT READY TO SHOW?

Your work is "ready to show" at any stage. You can be helped by the group at any stage.
(With rare exceptions)

QCO?

Presenter

- Set the stage
 - Where I am in the project
 - Objectives for the work
- Show and tell
 - Here it is, what I'm thinking about

Activities

Reviewing support data
Reviewing forum questions
Reviewing outcomes metrics
Reviewing sales demo questions/ops
CAB discussion of benefits

Data sources

...and how well we use them

- Market insights
- Sales demo questions
- Customer blockers
- CAB discussions
- NPS comments
- Support tickets
- Forum questions
- Too-common implementation difficulties
- Product use (user outcomes) metrics

New capabilities

Improvements to existing capabilities

Best Practices

COMMUNICATIVE

I believe that if we BOTH pay close attention to quality AND fulfill latent needs in unexpectedly simple ways, stars and NPS (and thus share and revenue and profit) will follow. I believe that this approach also manages maintenance and support costs as a healthy side-effect of focus on users' latent needs.

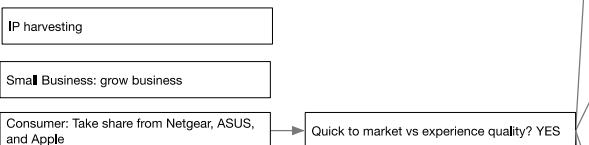

But which users? I believe that we need the geeks to recommend our products to the normals, and then our products need to reward the normals for taking that advice. This means getting and continually refreshing a solid understanding of these two customer groups.

We happen to make networking products, and we have the know-how to produce these products for homes and small-businesses that fulfill the above beliefs. But it will take real courage to organize our behavior around these ideas, especially at first.

- Linksys will create the most sought-after home and small-business networking equipment
- by delivering high-performing routers, access points, range extenders, and related accessories
- in a way that is uniquely suited to the observed needs of our users.

The result is that people will pay more for Linksys products than other brands, and they'll be happy to do so as demonstrated by rising NPS and share.

This means delivering new technology to both mainstream and bleeding-edge users quickly while maintaining a high level of quality (E+EA), then following that with a superlative experience under our special WRT marque by refining these technologies to address the needs of the enthusiast famously well.

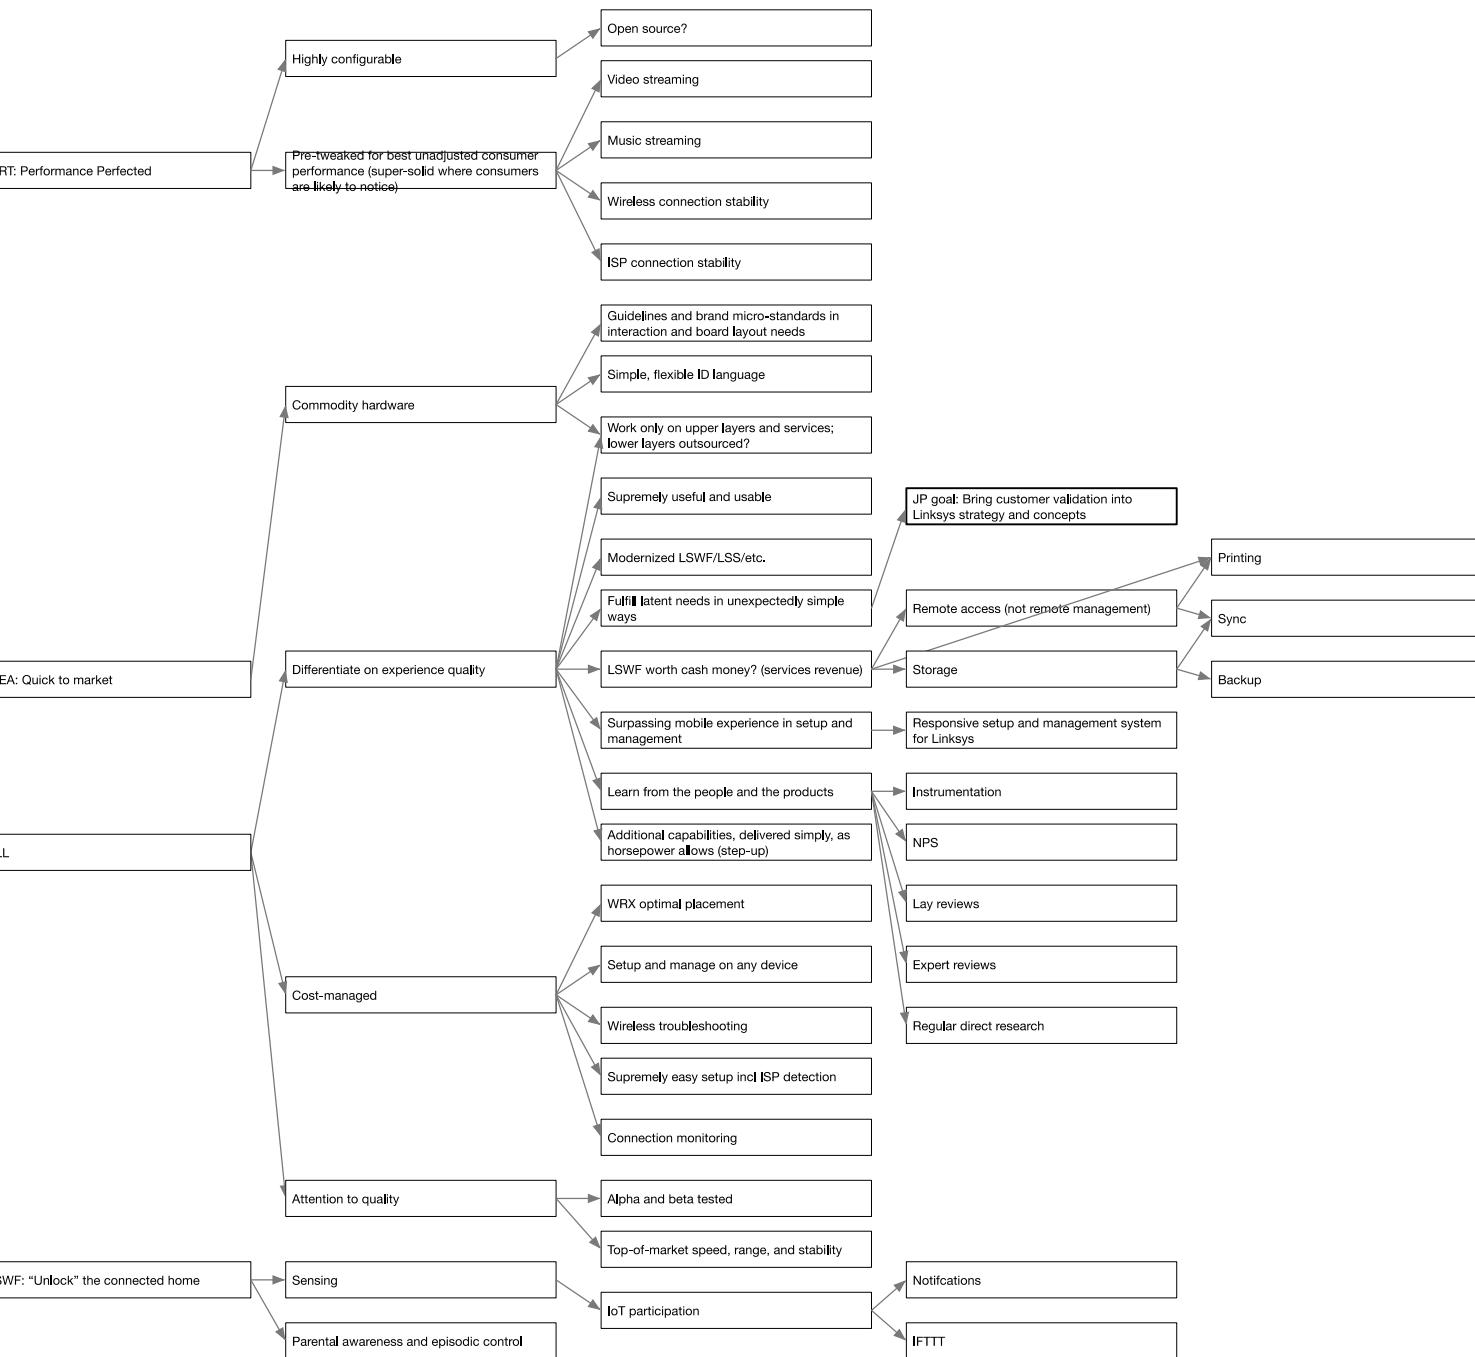

And what do we really mean by quality? The baseline "high level of quality" means delivering

- The best or very nearly so in range, speed, and reliability at the relevant price point, and the best of least one of these three
- A single, polished setup process that users are highly successful with and that can be accomplished with no undue effort, be it on a smartphone, tablet, or computer
- Particular attention to high performance in areas where a user is likely to notice, such as high-quality video streaming, seamless roaming, etc.
- High levels of configurability, with low or no configuration required for high performance
- Features/services that forestall difficulties and help people get the most performance possible out of their router and ISP

As products become more capable (expensive), the opportunity to differentiate in software and services increases – the router (etc.) becomes more able to deliver additional benefit. We will not slavishly deliver every feature that our competitors deliver, but will restrict our effort to those high-value hardware/software/services capabilities that our users most value. We will deliver these capabilities in uniquely simple, useful, and intelligible ways that our customers will eagerly adopt and tell their friends about. The emphasis is not on doing everything, but on doing small needful things in a polished and desirable way.

Understand the real needs of real people, then design and deliver answers to those real needs that deliver desirable benefits famously well.

BRAND CAMP

BLUE

Emerging experience quality themes

We aren't really doing these basics yet

- Draw user attention to the right place
- Help people make decisions and take the right action
 - What is the main thing I need to know or do when I arrive here?
 - Help people reacquaint themselves with the work so they can rapidly contribute
- Prioritize and “chunk” data for maximum scanability and intelligibility
- Label data and actions plainly
- Develop common language across products
- Solutions come from understanding well-expressed needs rather than “data solutioning”

These require us to learn about the challenges our users face in order to demonstrate thoughtfulness beyond “the requirements”

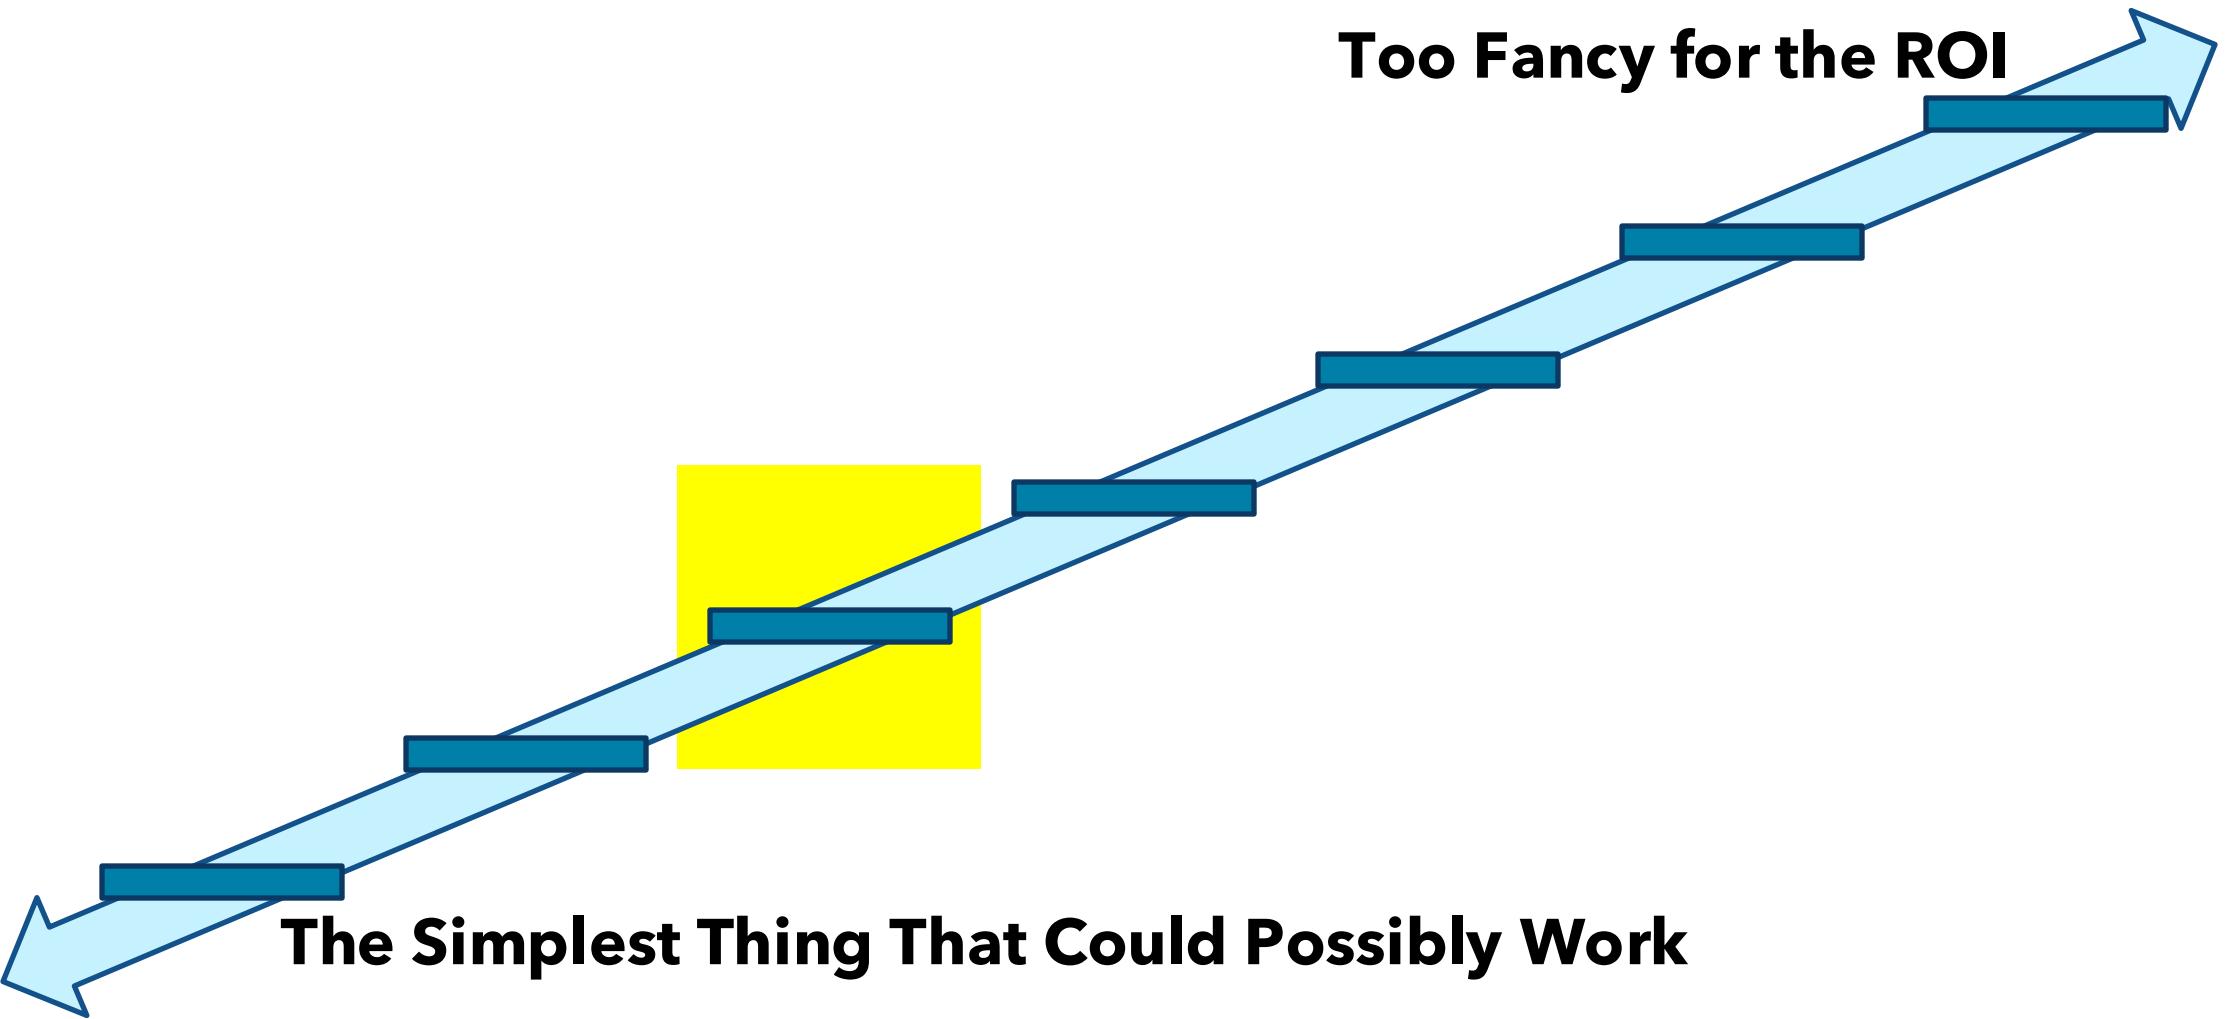

Goals > Instructions

Acceptance Criteria for Patterns

Things common to multiple views

Patterns in a typical list view, for reference

Nav bar
Common controls
List topmatter Filter controls
List item
List item
List item
List item
Paging navigation
Selected items actions
Footer

The typical page is a stack of nested patterns:

1. Nav bar
2. Common controls

view/manage collection (detail view)	Collection
confirmation pages and guards	Heads Up
error states	Error
logged out of OSMT	Logged Out

Public Views

RSD View Pattern
{RSD name} | Rich Skill Descriptor | {tool name}

Collection View Pattern

3. Content, in this example a list view consisting of
 - a. List topmatter (describes the centerpiece of the view)
 - b. Filter controls (operates on the centerpiece of the view)
 - c. List items (the centerpiece of the view)
 - d. Paging navigation (operates on the centerpiece of the view)
4. Selected items actions (operates on the data elements in the centerpiece of the view)
5. Footer

These patterns and others are described below.

White label

A few white label parameters are available to the organization building an instance of the OSMT

1. A logo URL
2. A product name
3. A single brand color hex value
4. A default author string
5. Whether or not the author field is editable
6. A creator URL
7. A copyright string
8. A public skill view title string
9. A public collection view title string
10. An IdP logout redirect URL

Design System

White Label

Behavior: Author visibility

The visibility/behavior implied by "whether or not the author field is editable" is covered in relevant views *new/edit skill form*, *new/edit collection form*, *skill view*, and *collection view*. But in general,

1. In forms, the author field is not shown if it is not editable.
2. In non-form single-item views, i.e. *single skill* and *collection*, author is visible since the view hearkens to the public view.

3. Author is always visible on the *public view of skill* and *public view of collection*.

Pattern: page <title>s (metadata)

Views

Every page should have a sensible and informative <title> element. This is the content that typically appears in window headers, browser tabs, bookmarks, and link text on other sites to help users identify these at a glance.

Elements and behavior

Internal Views

Detail Views Pattern
{RSD or collection name} | {page heading/H1*} | {tool name}

examples:

- Written Communications | Edit Rich Skill Descriptor | OSMT
- Information Technology Management – B.S. Business Administration | Collection | OSMT

Non-Detail Views Pattern

{page heading/H1*} | {tool name}

examples:

- RSD Library | OSMT
- Batch Import | OSMT
- Search Results | OSMT

*Notes About Headings

A few views do not have the typical page heading/H1. These are listed here with the text string to use in the <title> of each view.

View	Text String to Use in <Title>
view/manage RSD (detail view)	Rich Skill Descriptor

Pattern: common controls

Views

The common controls module appears over all internal (logged in) views **except**

- Batch import process views
- Guards against publishing a collection with draft or archived skills

Design System

Common Controls

- Each action item can be either an anchor or a button depending on engineering needs. Buttons do something, anchors go somewhere. The class can be .button or .link

Pattern: public nav bar

Views

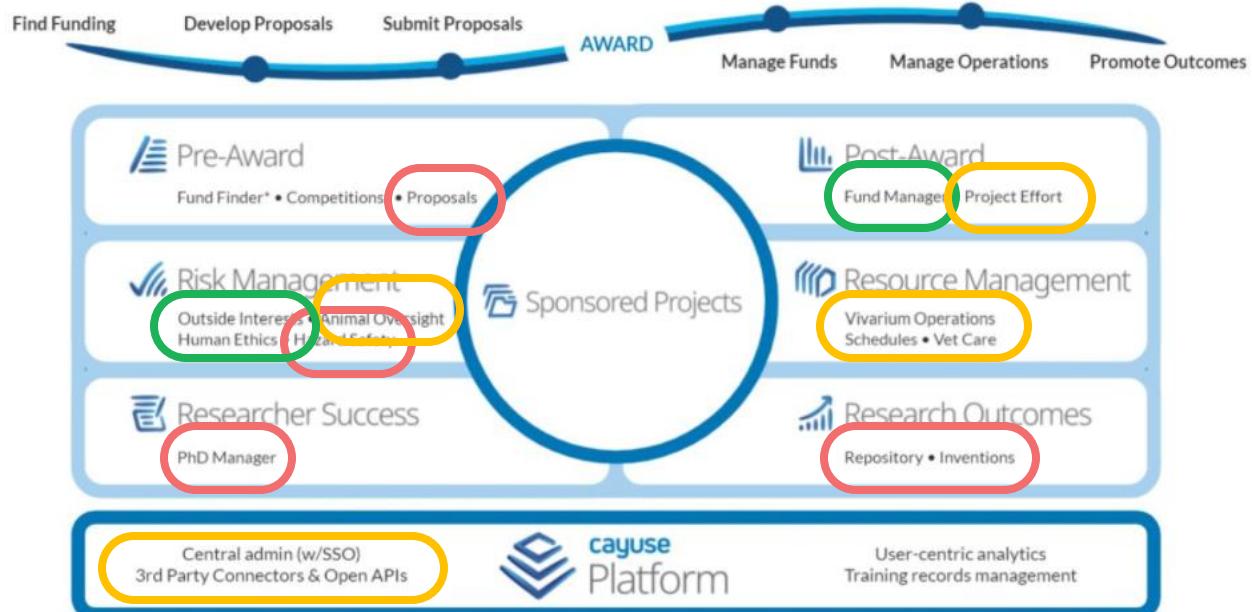

The public nav bar appears over public views, namely the *public skill* and *public collection* views.

Design System

4. A hidden "skip to search" link (this can be found as part of the broader [Header pattern](#))
5. A link to the *skills library* view
6. A link to the *collections library* view
7. A link to log out

Everything you need in one cloud-based research suite

Manage awards from start to finish and drive impact across the entire hierarchy of challenges

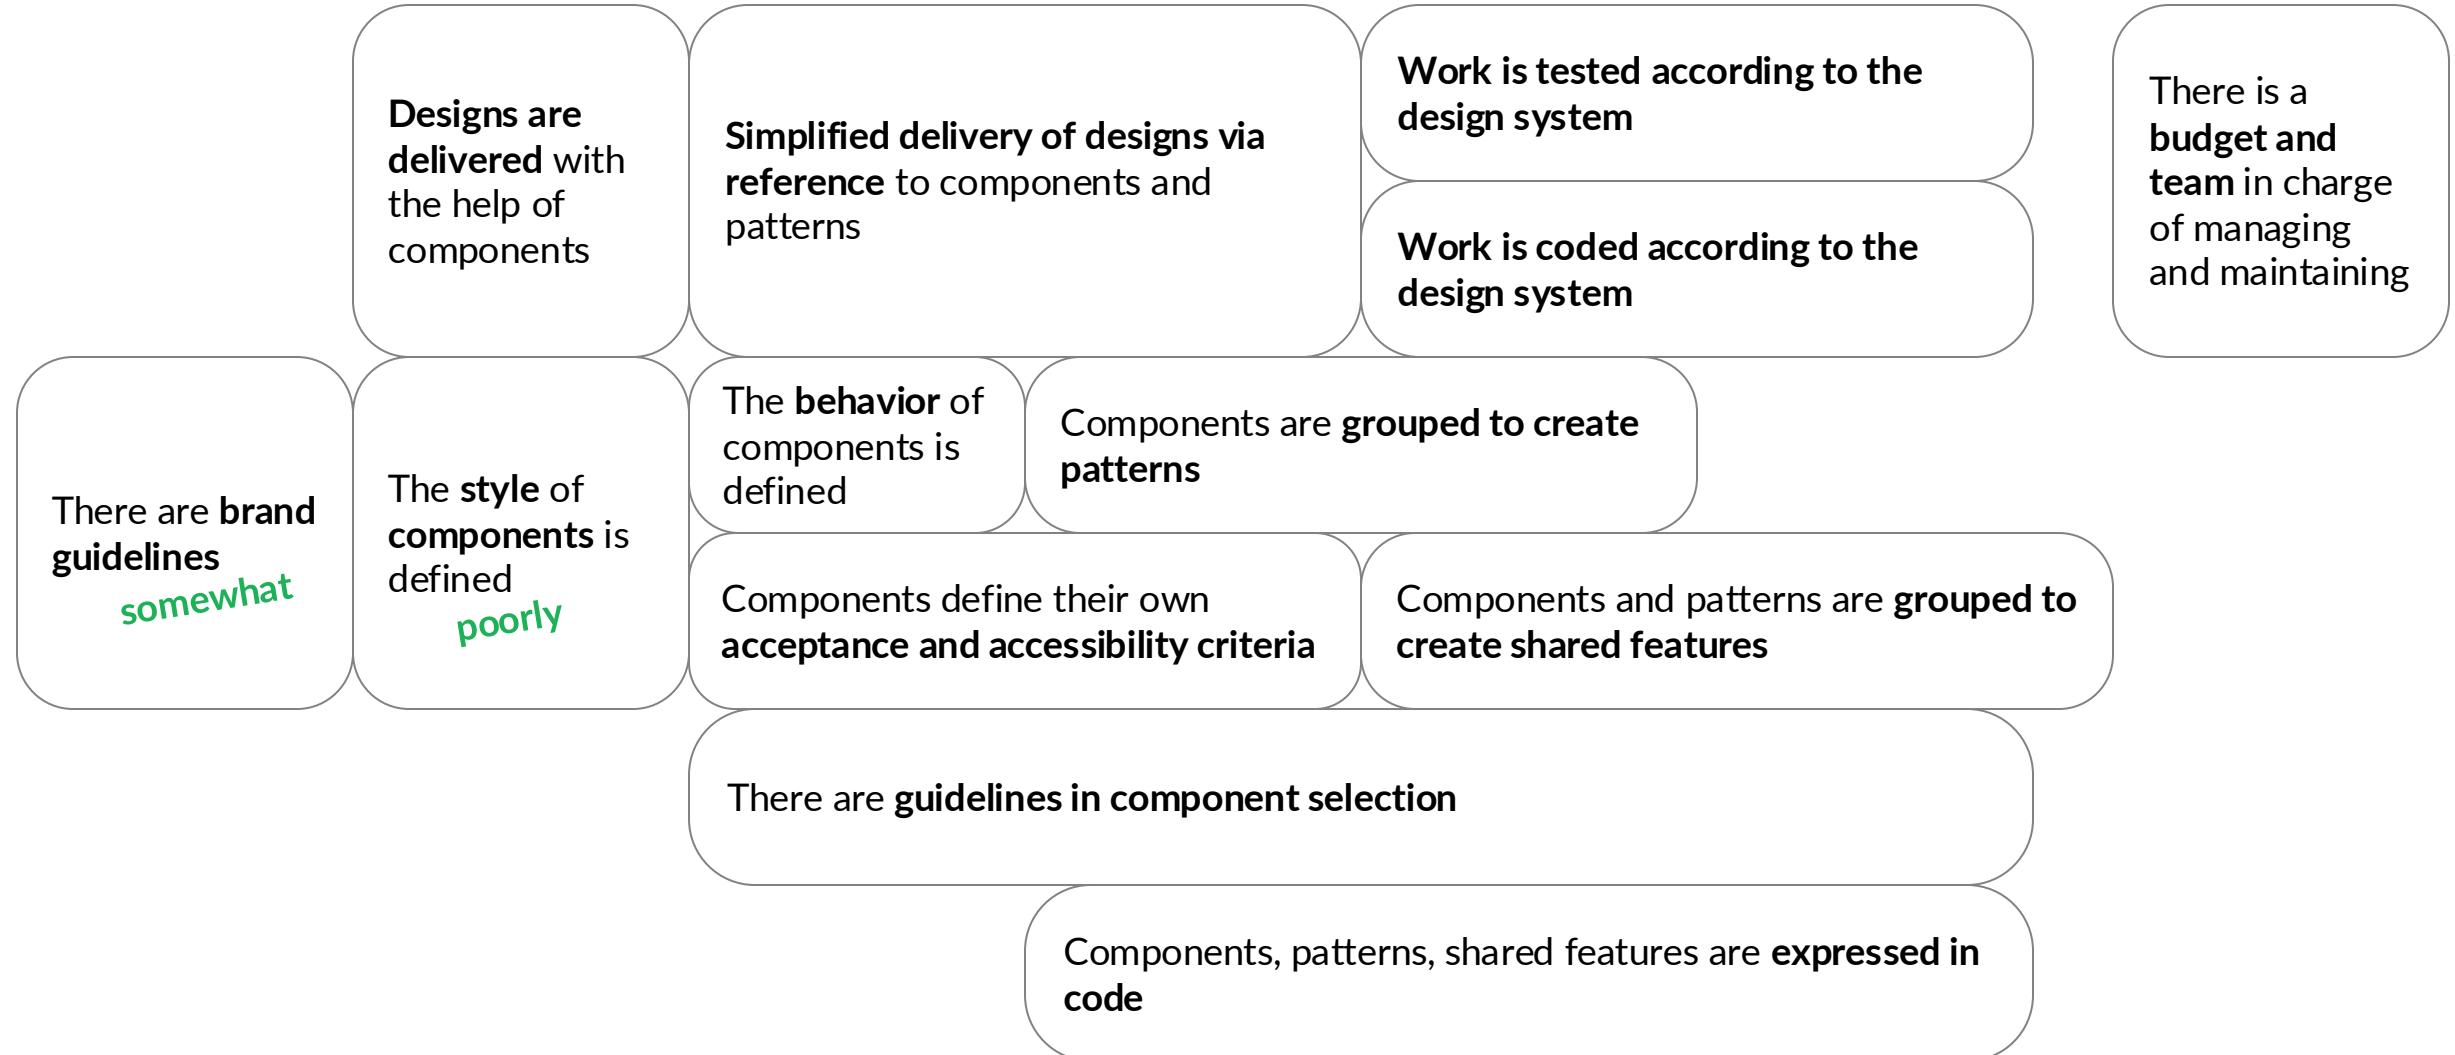

- Good-ish
- Iffy
- Bad

*Note: Fund Finder is a Cayuse partner powered app where we give the option to customers of leveraging either Pivot or GrantForward. Competitions is also powered by Cayuse partner, InfoReady.

I don't have good before and after, argh

Design system → pattern library maturity model

The screenshot shows the Cayuse Home interface with the Product Management space selected. On the left, there's a sidebar with navigation links like Home, Recent, Spaces, People, Apps, Templates, and Create. The main content area displays a "Status Pill" component with states like REOPENED, PENDING, APPROVED, REVIEW COMPLETED, AWAITING CERTIFICATION, UNDER REVIEW, UNDER CODE, REQUIRE CHANGES, UNSURE, UNDERTAKEN, and UNIMPLEMENTED. To the right are the "Suite Header" and "User Menu" components.

This screenshot shows the Product Management space with the "Components" section open. A specific "Button" component is highlighted. The component details page includes a description, author information, and a preview of the component's visual state variations (Primary, Secondary, Specialty) across different sizes (Standard, Small). Below this is a "Design File" section showing a Figma wireframe of the button component. The sidebar on the left lists various UX components and tools.

FORM ELEMENT COMPONENTS

Accessibility Guidelines

VPAT issues

Cayuse Accessibility Audits _known issues compiled

This spreadsheet consolidates reported accessibility issues in Cayuse products. To focus on specific issues related to modal dialogs, try these filter parameters:

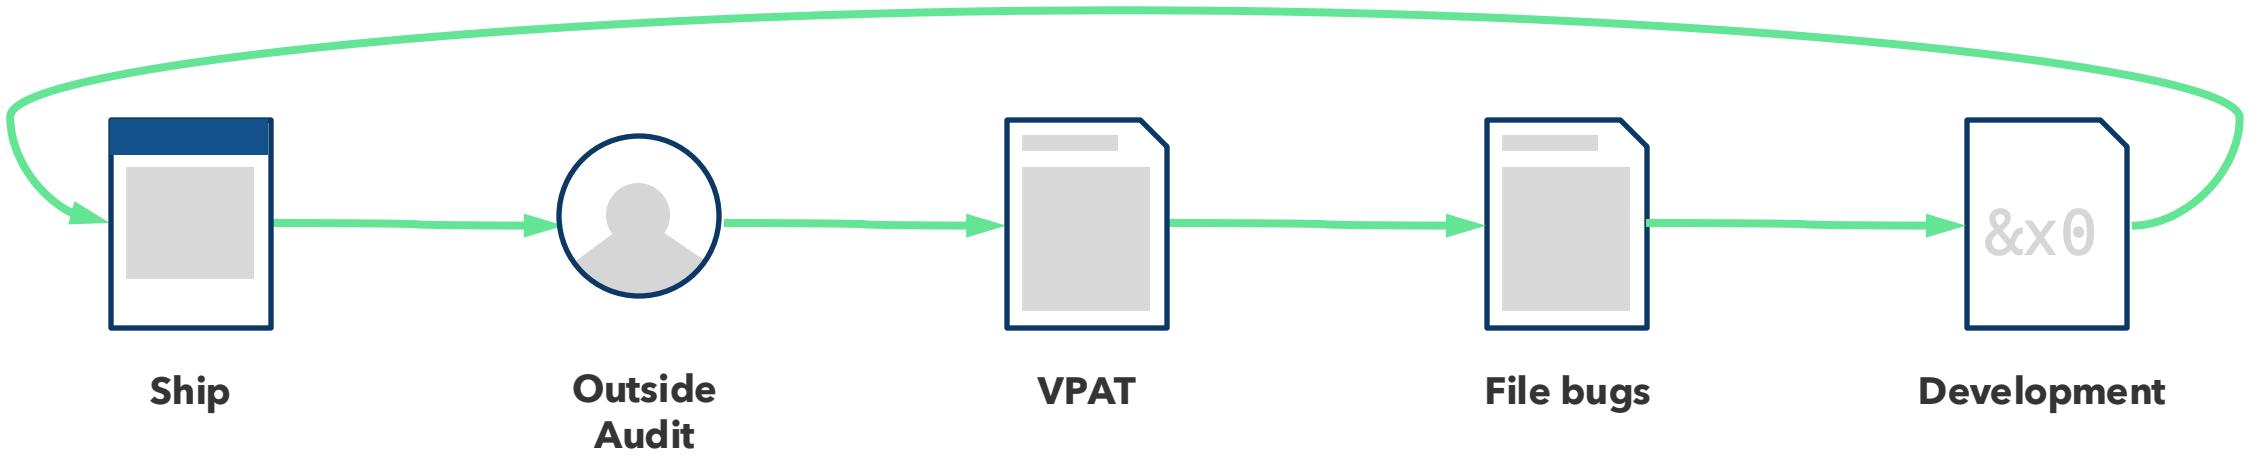

Areas: Button and/or Pattern: Button

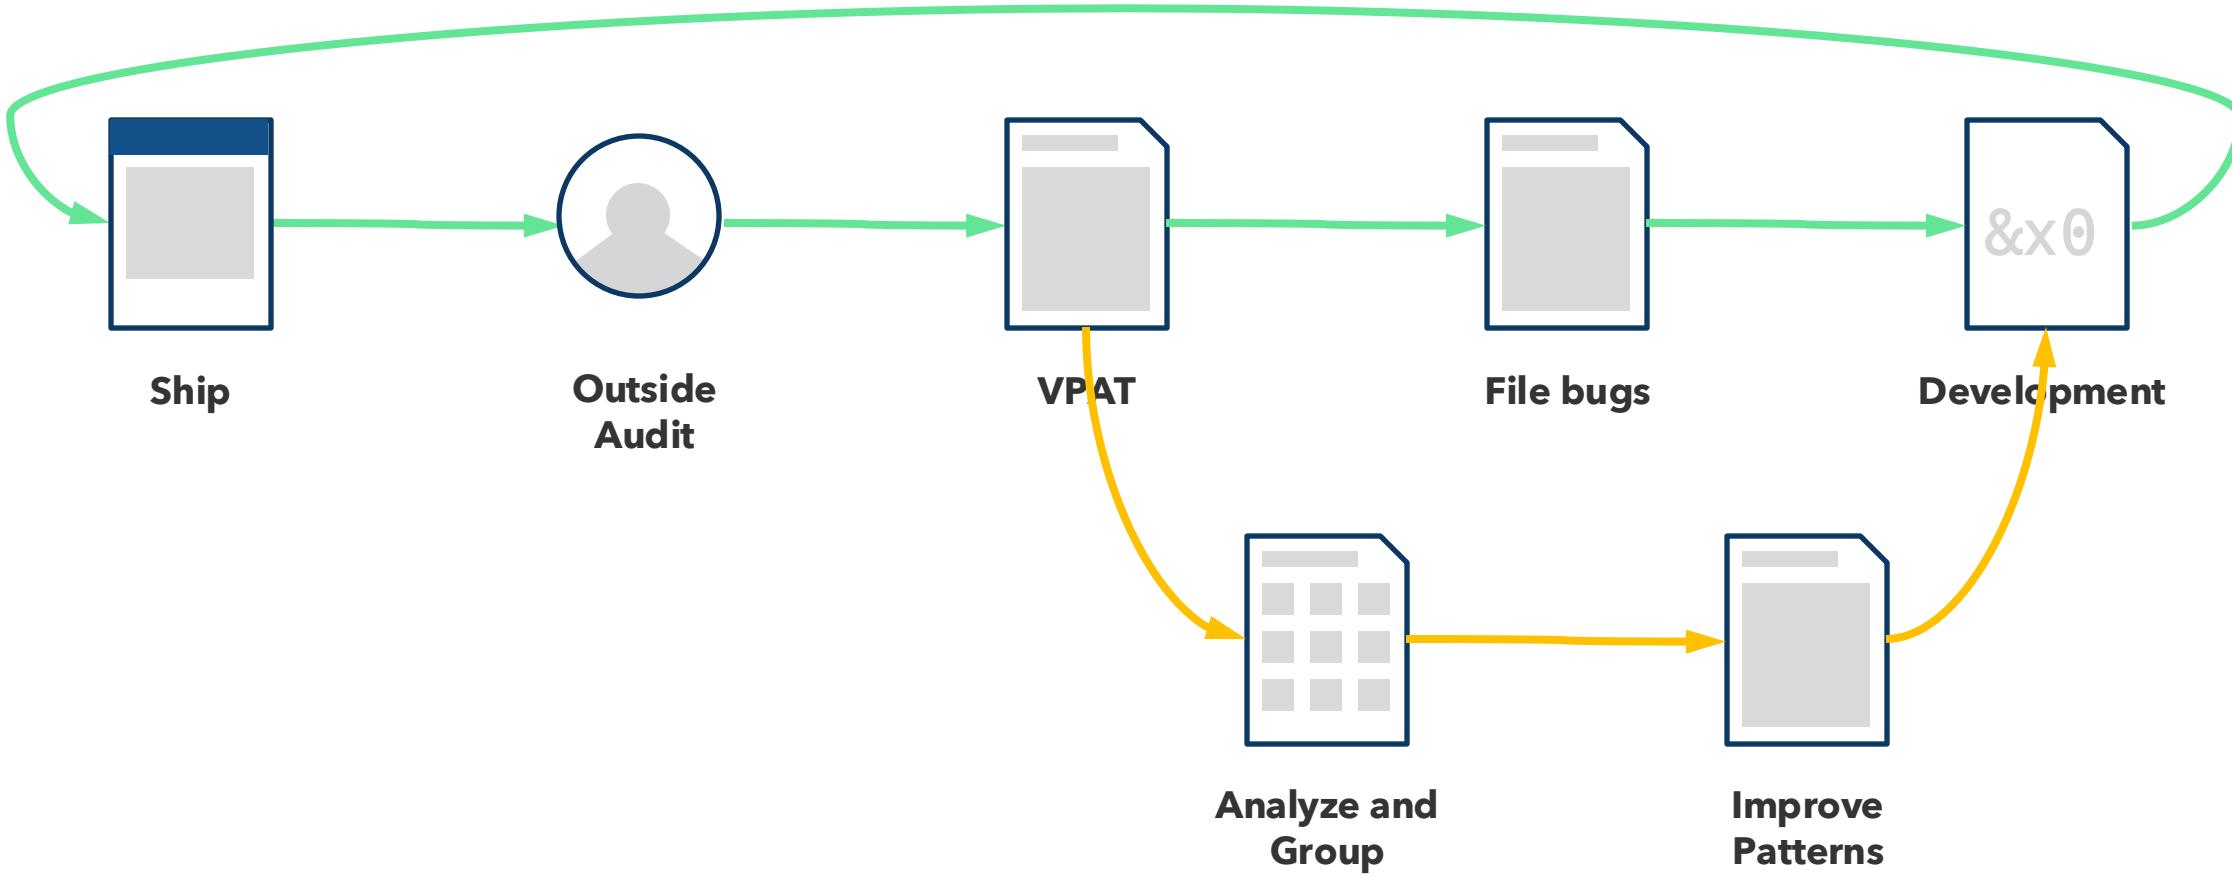

Recommendations (WIP)

- Recommendation 1
- The icon should not be a replacement for displaying the main purpose or action of the button. ²
- Recommendation 3 ¹

From VPAT:

Quickstart

The screenshot shows the Cayuse Home interface with the Product Management space selected. On the left, there's a sidebar with navigation links like Home, Recent, Spaces, People, Apps, Templates, and Create. The main content area displays a "Status Pill" component with states like REOPENED, PENDING, APPROVED, REVIEW COMPLETED, AWAITING CERTIFICATION, UNDER REVIEW, UNDER CODE, REQUIRE CHANGES, UNSURE, UNDERTAKEN, and UNIMPLEMENTED. To the right are the "Suite Header" and "User Menu" components.

This screenshot shows the Product Management space with the "Components" section open. A specific "Button" component is highlighted. The component details page includes a description, author information, and a preview of the component's visual design in Figma. Below this, a "Design File" section shows a wireframe of the button component with various states (Primary, Secondary, Specialty) and sizes (Standard, Small). The Figma interface shows a library of button components and an example interactive demo.

FORM ELEMENT COMPONENTS

Below are Components found in the [Common Header Form Elements Pattern](#)

The screenshot shows the Cayuse Home interface with the "Form Element Components" section. It includes a "CSS / For Developers" code block with SCSS code for button styling, an "Accessibility Guidelines" section with a VPAT issues table, and a "Recommendations (WIP)" section with a list of items.

```

/*
STANDARD LAYOUT FOR THESE BUTTONS
*/
padding: 8px 16px;
border-radius: 3px;
font-family: 'Latoo';
font-style: normal;
font-weight: 700;
font-size: 14px;
line-height: 16px;

/* Colors for Primary Buttons */
background: #0076B6;
color: #FFFFFF;

/* Colors for Secondary Buttons */
background: #FFFFFF;
border: 1px solid #005C8E;

/* States/Disabled Accent */
background: #EEEEEE;
color: #ADADAD;

```

- The icon should not be a replacement for displaying the main purpose or action of the button. ²
- Recommendation 3 ¹

Design system → pattern library maturity model

how you've been able to drive a cohesive product experience in a structure like ours where designers are working in different product areas of a platform and with a remote work employee base

Three horizons

H1: close to release

Detailed design and development of features

H2: pre-development

Select and conceptually design individual features to deliver those benefits

H3: looking ahead

Understand user and org needs and behavior, offer and select benefits

“ operational aspects of how to balance UX designers/capabilities with roadmap needs
