

FY26 CKO Lightning Talks:

What EVEN IS a concept sprint?

And what did we do to arrive at our messaging concept?

And what can I learn from this?

And how many subtitles is too many?

And why wasn't the previous one the last one?

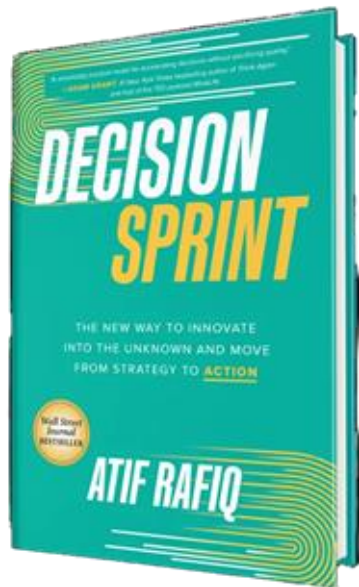

Jon Plummer

Director of User Experience

February 6, 2025

Design Sprint Process

1

Understand

2

Sketch

3

Choose

4

Prototype

5

Test

...

Decide

Our Challenge

Given that we want to help our customers succeed via the medium of messaging:

What opportunities are there for Invoca; what might we try to accomplish?

Why we're here

In the span of a week we will:

- Learn about the customers, competitors, landscape, and current state relevant to thinking up an SMS product
- Go from problems to ideas to concepts to end-to-end experiences
- Figure out what we need to learn to proceed with knowledge and speed
- Think up a ~~prototype~~ *thing* to learn that
- Make a ~~prototype~~ *thing* and test it with real live customers
- Refine our thinking based on those tests
- Estimate a new MVP and arrange a potential roadmap
- Pitch our idea

Agenda

Date	Monday, Oct 14	Tuesday, Oct 15	Wednesday, Oct 16	Thursday, Oct 17	Friday, Oct 18		
Theme	Understand	Develop ideas and concepts	Select and develop a concept	Test, prioritize	Pitch and next steps		
Goals	Learn about the situation, tee up some problems to solve	Generate ideas, flesh out into concepts	Arrive at an MVP, decide what to test, make prototype	Test, refine, refine, sketch architecture	Estimate, pitch		
8:30 AM	Arrival	More background (KM)	What's common? What's dependent?	Test prototype; also, sketch architecture (TD)	Final customer sessions; estimate MVP; prepare to pitch		
9:00 AM		Examine HMWs for reach and customer value	Identify an MVP and what we need to learn				
9:30 AM							
10:00 AM		Sketch/storyboard ways to solve the most appealing problems	Plan a prototype of that MVP and make it		Pitch		
10:30 AM							
11:00 AM							
11:30 AM					Wrap up		
12:00 PM	Welcome, kick off	Lunch and catch up with the office	Lunch and catch up with the office	Lunch and catch up with the office	Departure		
12:30 PM	Background						
1:00 PM		Sketch/storyboard ways to solve the most appealing problems	...and make it	Discuss testing results			
1:30 PM				Refine prototype and MVP thoughts, consider roadmap (TD)			
2:00 PM	Break	Review concepts so far					
2:30 PM							
3:00 PM	Develop HMWs	Break	Break	Break			
3:30 PM		Sketch end-to-end experiences	Form test plan	Prepare to pitch			
4:00 PM							
4:30 PM							
5:00 PM							
5:30 PM							
6:00 PM							
6:30 PM	Welcome dinner			Farewell dinner			

Concept Plan

Design Sprint Process

0

Read a sheaf of pre-read material

1

Understand, watch for problems and use cases

2

Translate these into benefits we might offer

3

Score benefits for customer value and reach

4

Generate ideas and choose one

5

Make a thing and form a test plan

6a

Demo to customers, collect feedback

6b

Sketch out what it might take technically (+ time & treasure)

8

Decide, prepare for a pitch

- RCS lead qual tree
(like IVR) vs AI vs humans

okart is risky!

state numbers (kattr) lead to

- lead capture, then
lead qual & redirect then
or agent conversation, qual, redirect, then

- analyze redial success per interaction types & timings

value - 7% of calls not answered, some proportion convert after calls reattempt

- Set up agent-busy plumbing to Invoke
- Set up keypress to Text

Benefits:

Smooth out Agent utilization
Capture/keep active leads that would have

CUSTOMER WANT/NEEDS/PROBLEMS

What (what, how, when)? Messenger, Call Center, Email

Reasons for

- Speed to text
- High speed response rate

Expectations:

- Easy effectiveness (automation)
- 24/7 availability
- Low cost
- Simple
- Some # is double

Problem: - Low level of marketing attention on new tech

Why SMS lead initiated SMS?

- Agent captures when they are possible multi-level
- Agent know the firm, another inbound call
- Need to collect existing customer meeting request
- Fair up with screening - ads
- require more known for all hours

We personal cell numbers

- SMS: - Low level of personal capture issues
- voice: - No visibility across all SMS
- AI: - No compliance, no shared context

? OK, call to share message

SMS Integration

Analyze how many credits are being in the bag?

No clear rules are important, for app based biz - cost? integration challenge?

Opt out integration

Train bot based on existing (phone) conversations for customer that we already have

Lead provider # can be tested

- Speed (thousand times) is important when volume is engaged
- Two-way, even if automated

Most conversations don't happen on SMS itself, need to have action elsewhere Call / Link

Multi-function customer need scaled solution for all functions

Lead calls but doesn't answer

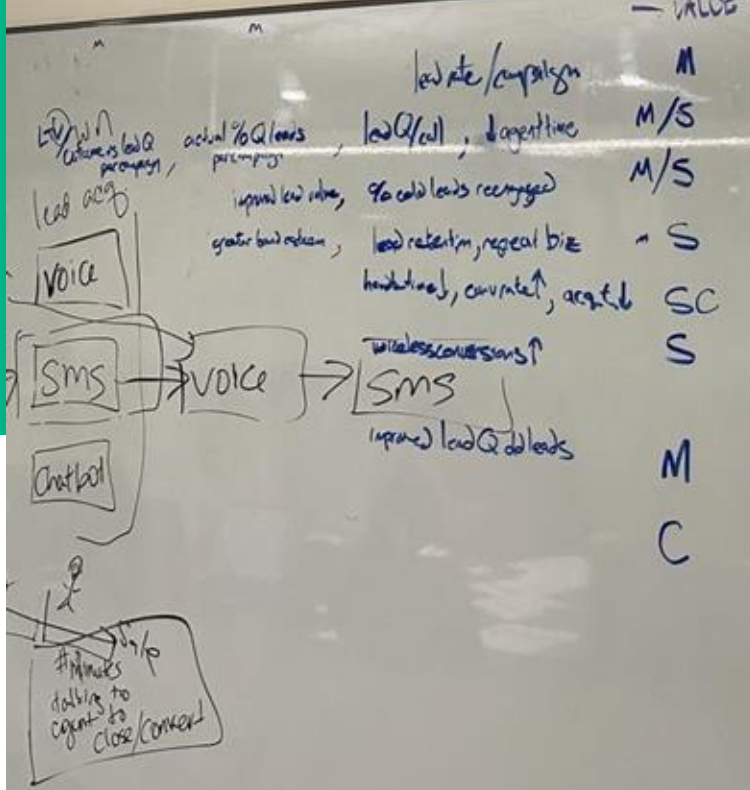

Typically in business, equivalent drivers
We can integrate/impact on AI to play into existing SMS tech

Create documented use around existing system plan workflow

Use cases so far

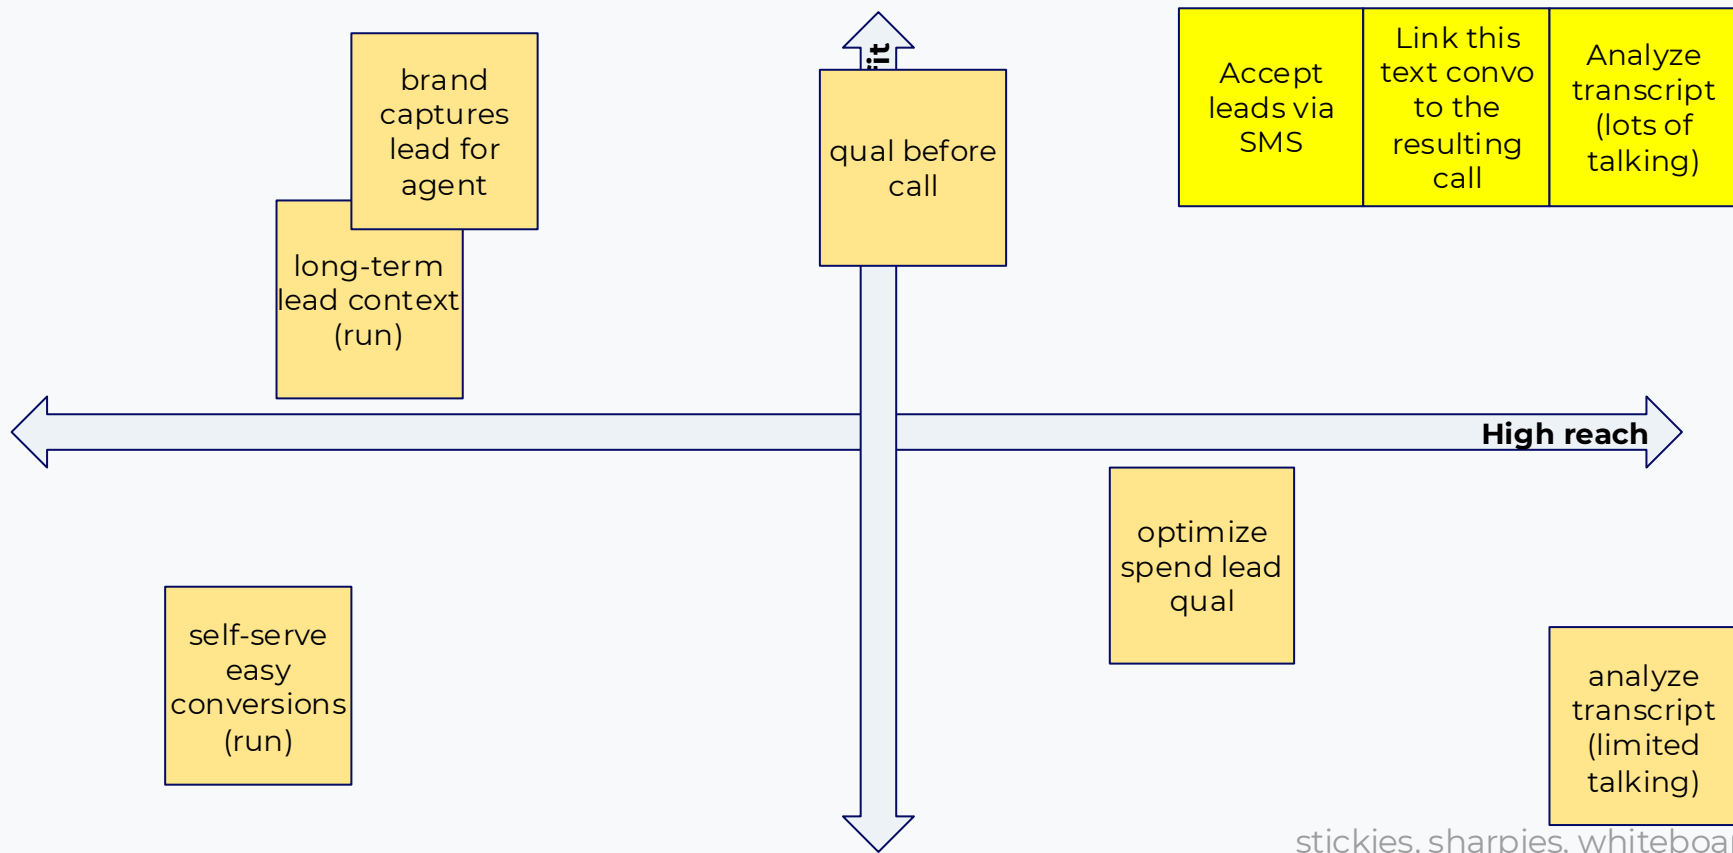

- lead nurturing – keep someone warm who came in via another channel
 - lead form results in an SMS
 - SMS follow-up based on call outcome
- after-hours lead-handling – engage via SMS when call center is shut
 - missed call results in SMS
 - form lead results in SMS or call depending on hours/availability
- deflection of calls to self-service channels
 - self-service appointment scheduling
 - redirection out of IVR for select call types
- actual conversations over SMS
- ...and coaching on same
- tracking and attribution of inbound SMS
- tracking of outbound SMS
 - ...and bundling that with inbound conversations for attribution
- Which campaigns/channels/keywords result in quality SMS leads?
- Provide attribution when SMSing a non-unique number
- lead form (attribution) to sms warm-up to call (attribution)
- Content extraction/signals/scorecards on SMS conversation
- Associate conversion to activity on any channels
- appointment/service reminders or other scheduled communications
- attribution/enh. conversion on inbound SMS from sources: web, video, offline
- Score inbound SMS leads (with data from other channels)
- SMS conversations are sadly separate from same-lead contact in other channels
- Per agent #s for calls and SMS (auto, insurance)
- Which comms in which channels contribute to conversions at what rates?
- Hand opt-outs to a relevant system (and receive them)
- Deflect/route contact by content (text content, attribution data, existing customer)
- Call & text on same #
- SMS automated response for speed
- Fewer calls or agent time per customer acquisition
- Keep leads in-house when agents turnover
- Feed extracted data to CRM
- Text transcript ingestion to evaluate customer outcomes/lead scoring/coaching
- Be available to consumers where and when they prefer
- understand journey types that convert (or not)
- How best to intervene with this cohort

- VALUES**
- offer inbound SMS to generate more leads (ads, video, after hours, missed, etc.)
 - inbound SMS + 2 way to qualify leads better before call
 - dead/cold leads revived via reengagement (lead form, non-converting call)
 - brand captures lead for agent (resilient to agent Δ)
 - persistent lead context for rapid interaction
 - self serve through SMS to avoid calls for "easy" conversions (redirection)
 - transcript analysis to identify segment to retarget
 - features of conversations that convert

...reach and customer value

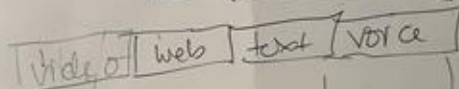

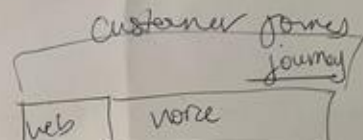

Web → (Text) SMS → (Voice) Call → Call Center

- All insights
- Structured data
(lead form qualifying
key/values)
- Route based on SMS data
- Send SMS data in PreSense

Web

RCS

embed nontext
interactions in
messages

reduce

Test plan

- Nathan handles introductions
- OK to record?
- We've been focused on an idea that might help you make money on leads that you're missing out on
 1. ★ do you have this problem – how big is it – we think this might represent a big oppty
 2. ★★our idea is to allow a subset of calls to be handled by sms (watch for compliance or other objections) (watch for wishes to capture other forms of missed calls)
 3. ★★example of chat – qualify the lead and offer them the high priority queue – can also divert to other paths
 4. ★ we've thought about ways to get your qualification questions and endpoints into the chat tool
 5. ★ and although the customer goes from call to chat to call, the attribution chain is unbroken - we gather customer information the entire way (see if this is satisfying or the mention of changing channels causes worry about phone numbers)
 6. ★★based on this info, that data can be used to route, skip the line, pop data to agent, etc. (see if this is satisfying or the mention of changing channels causes worry about phone numbers)
 7. ...and of course you'll want to see how well your chatbot is doing capturing these otherside lost leads for you
- Topics
 - Is this a thing you'd like to try
 - Comfort with a chatbot
 - Attribution maintained but numbers change
 - Other possibilities sparked by this idea
 - Is IVR opt-in enough to send a text?

★ **Hypothesis 1:** Break out of call to qualify / keep a lead alive via SMS is valuable (the thing) & appealing (how we're doing it)

★ **Hypothesis 2:** Chatbot is ok

★ **Hypothesis 3:** SMS is something you'd want to offer to a large set of callers (all callers? after hours only? service calls only? long wait times only?)

★ **Hypothesis 4:** Click to call is ok

Customer schedule

6	Overall reaction	- definitely interested to try, want to share the recording with Dan		- interested to try, especially reducing after-hour calls and also busy monday morning calls - also concerned about compliance.	- interested to try, but need to talk to other people first before deciding	Already experimenting SMS, though prefer text us first over break-out-of call	Can we have this? Pre-order. - Fit perfectly well with their data cloud initiative next year, wants to do remote consultation - Given the scale of our business, small increase of the contact rate, appointment rate, would have massive impact on us.
	Hyp: uncaptured leads that tried to call are valuable	Yes	Yes	Yes	Yes	Yes	Yes, big-time
	Objection/Comment	problems resonated well with them - 15%-17% calls dropped right away during business hours After-hours SMS is already working!	100% resonates, their no-answered rate is 34%.	Have a call center that does a good job answering but people drop after 40sec; lots of overstaff to maintain high answer rates (3% unanswered)	- Agree that calls not making it to an agent is an issue - - Yes, from CC perspective. But not much from marketing perspectives. - Interested in the leakage	50% of their calls never make it to an agent	Nods; spot on, this is a big problem. They don't want to make calls, talk on the phone, wait on the phone. Also outbound phone calls are unanswered
5	Hyp: chatbot is okay	Lukewarm on bot	Yes	Yes	Yes	Yes	Yes
	Objection/Comment	currently using bot for web chat, would need more signals, feels they are currently running out	Lukewarm on bot, suspects rigid tree will appeal more; constrained is safer than AI Clarified that IVR and SMS is all Invoca Currently use Quick for SMS chat, but with real agents All their SMS is currently agent- and call-center-driven	SMS conversations can survive delays, whereas people expect web chat to be instant Asked clarifying questions to apply the workflow to their business	Bot is similar to IVR which is already OK – They asked if AI only or could they have full control	RentEngage is a virtual leasing office for lessors – has an AI oriented to getting a tour scheduled, deflects from needing a live agent; interested in text because a lot can be "lost in translation" in voice – Caleb has explored helping prospects who don't have a specific	"This is the hatch.com form phone calls instead of form fills" – already doing a SMS chatbot off of a lead form because no one answers the phone likes directing call to SMS

Consumer Offered Option to Continue Conversation Over SMS

Thu. Oct 3 at 8:48 pm

Thank you for calling ABC Telecom after our normal business hours. What product are you interested in today?

Reply "STOP" to unsubscribe.

I am interested in home internet service.

Great, what home address are you looking at for high speed internet?

12345 main st. Spring Field, MO, 65619

We have the following fiber internet options, which one are you interested in?

1G Speed

5G Speed

10G Speed

5G

Great choice! Here is more information on 5G high speed home internet. You can take a look.

Do you think 5G internet is the package that you want to purchase? There is actually a 10% discount for new customers in your area.

Yes

Would you like to call back to talk to an agent when our office is open at 8am tomorrow? As a high value customer, we can provide you with a prioritized line, so that you don't have to wait.

Yes

Great! We'll send you a message when the office is open, getting you right to an agent.

Fri. Oct 4 at 8:00 am

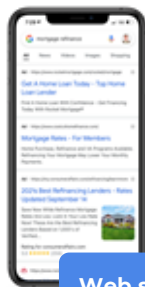

Good morning! As promised, you can call now to discuss new 5G internet service with one of our priority agents. Click to call now...

What All This Means for You

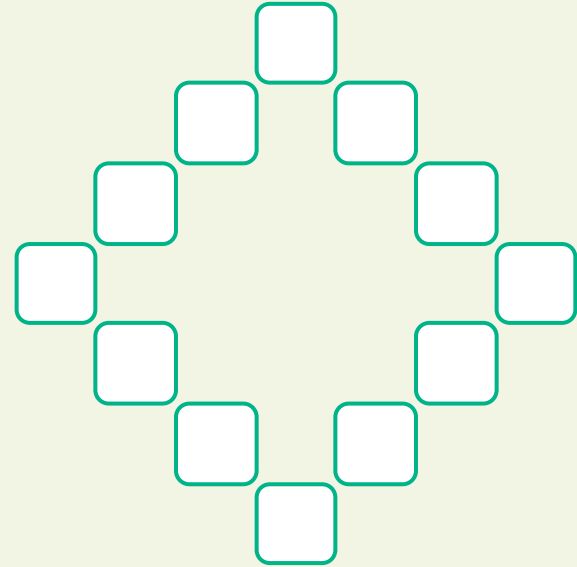

- We hope to do more of these
- We will have other workshoppable things for which this exact process doesn't make sense, that's fine, we can adapt
 - And anyone might have a role(!)
- The general structure is the thing, and it reminds us of some key points about creativity

Creative Diamond

Single, double, whatever, it's diamonds all the way down

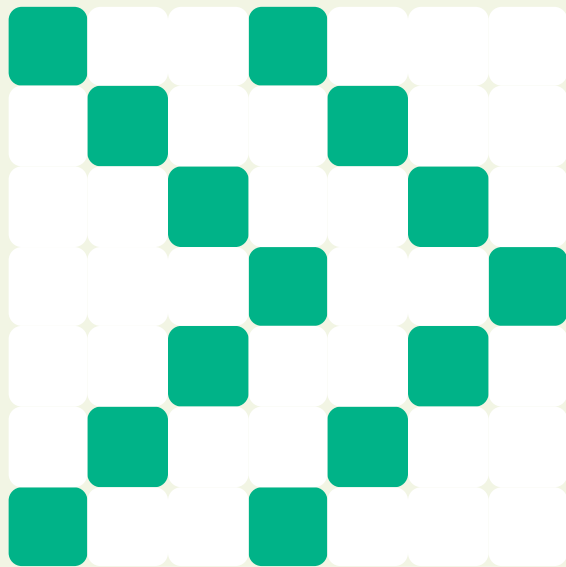

- Understand
- Generate
- Select

Benefit, Concept, Detail

Echoed in SDLC: Exploration, Planning, Sprint

- Benefit (Explore)
 - What's the problem? What's a valuable and happy result that arises when the problem is avoided, mitigated, solved, or eliminated?
- Concept (Explore and Plan)
 - How might we deliver that benefit? Which idea is desirable, feasible, strategically relevant, and actually helps customers and Invoca?
- Detail (Plan and Build)
 - How are we going to do that, specifically? What part of that can we deliver first that actually delivers value and people can accomplish?

Q&A
